

AristaTek is pleased to announce the release of PEAC-WMD 2007 v.5.6 for both Windows and the Pocket PC. The new release includes additional explosives and new features for the Explosion Calculator. In addition to calculating overpressure, the calculator now determines standoff distances for hazardous fragments.

More key Features of PEAC-WMD are listed below:

- * Integrated Mapping Tool (Windows version only)
- * Database with 100,000+ entries
- * EPA Acute Exposure Guideline Levels (AEGs)
- * IED Guide
- * NFPA 704 Hazard Classification System Guide
- * Gamma Radiation Dose Calculator
- * Fireball Calculator for Unconfined Vapor Cloud Explosions
- * Fallout Radiation Dose Calculator
- * Nuclear Detonation Calculator

To view a detailed description of these new features go to:
